

Convert Text into PowerPoint Presentation Using ChatGPT

Name: K. Venkata Sai Mrudula

Roll Number: 22HP1A4230

Problem Statement

Creating presentations manually is time-consuming, often inconsistent, and challenging for users lacking design skills.

Challenges addressed:

- Manual formatting takes time
- Design inconsistencies
- Lack of design skills among users
- Need for accessible automation tools

Introduction

- Presentations are common in academic/professional settings
- Design effort distracts from content focus
- This project uses ChatGPT + Python to generate PPTs
- Implemented in Google Colab for easy use

Existing System

Manual slide creation in tools like PowerPoint or Google Slides

Dependent on user design effort

Inconsistent aesthetics

No automation or AI support

Proposed System

SMS

Use ChatGPT for interpreting text

Use python-pptx for automated slide creation

No design skills needed

Consistent formatting and design

Integrated in Google Colab

Software & Hardware Requirements

Software:

- Google Colab
- Python 3
- Libraries: python-pptx, ipywidgets, datetime, google.colab.files

Hardware:

- Internet-enabled device (laptop/desktop)
- No specific hardware dependency

Modules Involved

User Input Layer

Takes text input

Parser Module

Splits and formats content

Slide Generator

Creates PPT using python-pptx

Styling Engine

Adds gradients, colors, layout

Output Module

Downloads final .pptx

Architecture

Machine Learning Model Used

No ML model used

Rule-based deterministic logic used

Key techniques:

- Line splitting
- Word wrapping
- Layout formatting
- Gradient styling

Testing (Running the Code)

- Run in Google Colab
- User enters structured text
- Clicks "Generate Presentation"
- Downloads .pptx file

Image: Screenshot of Google Colab input interface

Output:

Conclusion

Automates slide creation using AI + scripting

Easy, fast, and visually consistent presentations

Works for non-technical users

Reduces manual effort significantly
